

CeNano Shoe Deodorant

Instructions for use

Product description

CeNano shoe deodorant with silver ions provides protection and hygiene. It is scientifically proven that bacteria and fungi don't grow on silver. That is the reason why silver is a favour material for instrumentation and implant in the medical field, The CeNano shoe deodorant applies nano-silver ions inside the shoes which instantly kills almost 100% of bacteria and fungi and prevents them from returning. CeNano shoe deodorant gives shoes a fresh, pleasant scent.

Thinning

none

Application

approx. 30–50 pro m² (depending on the fabric)

Application

Shake well before use. Spray on an invisible surface to test the result prior to application.

Shows only need a thin layer of CeNano shoe deodorant. It is sufficient to spray your shoe 2-4 times. The shoe can appear slightly darker depending on the intensity of the application.

Storage temperature

Do not store together with strong oxidant. Protect from sunlight. Provide adequate ventilation.

Storage

Floors are dissolvent-stable. Keep the bottle closed and store at a well vented place.

Skin tolerance / compatibility

CeNano shoe deodorant is kind to skin therefore shoes can be used without stockings.

Drying

It takes approx. 30 minutes for drying at room temperature. Reapply as required. (The coating inside the shoe becomes more effective after reapplication).

Read carefully

The application instructions on this sheet are based on extensive research but do not in any manner diminish the responsibility of the user to ensure that the product and application method described herein are suitable. Note that the manufacturer will accept no liability unless purpose and application type have been agreed upon in writing.
